

ARCGIS FIELD MAPS - OFFLINE TPKX QUICK GUIDE

Android + microSD | Local imagery without burning cellular data

GOAL: Field Maps reads the imagery from your SD card. Cellular data stays out of the map pipeline.

1. PUT THE TPKX MAPS ON THE SD CARD

1. Put the microSD card in a computer/card reader.
2. Browse to this folder. Create it if it does not exist:

```
\\Android\\data\\com.esri.fieldmaps\\files\\basemaps
```

3. Copy the supplied .tpkx files into **basemaps**.
4. Put the card back in the phone. Open or restart Field Maps.

2. SELECT YOUR LOCAL TPKX BASEMAP

1. Open the Field Maps map you normally use.
2. Tap the **Overflow (...)** menu.
3. Tap **Basemap**.
4. Choose the desired TPKX from the SD card.

THIS IS THE IMPORTANT STEP: seeing a TPKX on the SD card is not enough. Select it as the basemap you are viewing.

About 'default': The true offline default basemap belongs to the web map configuration and is normally set by the map owner in Field Maps Designer. A normal phone user does not need that access; just select the local TPKX with **Overflow (...)** > **Basemap**.

3. BLOCK FIELD MAPS FROM CELLULAR DATA

Android: Settings > Connections > Data usage > Allowed networks for apps > **ArcGIS Field Maps** > **Wi-Fi only**

Menu wording varies by phone. Use the Android app-level network restriction. The Cellular Data switch inside Field Maps is not a complete cellular-data block.

Normal phone service can stay on. Field Maps gets Wi-Fi only - no cellular map-data surprise.

4. THE 30-SECOND OFFLINE PROOF

Wi-Fi OFF	Cell service ON	Field Maps = Wi-Fi only
Open your selected TPKX map and pan/zoom.	Calls and texts can remain available.	If imagery keeps drawing, it is coming from local storage.

If the TPKX does not appear: confirm it is in the **basemaps** folder and restart/refresh Field Maps. For downloaded offline map areas, the copied basemap must overlap the area and use the same spatial reference as the map's default basemap.

Official basis: Esri ArcGIS Field Maps Android documentation - Copy a basemap; Tools and features - Overflow/Basemap; Field Maps Designer - Offline basemap configuration; Esri Support BUG-000164200 - Android app-level cellular restriction.

Quick guide revised 2026-08-18. Android menu names may differ by manufacturer/version.
